### **The high quality standard demands of the William Leistner company**

The company William Leistner GmbH & Co. KG is a traditional family company in the Erzgebirge/Saxony and is working in the fifth generation now. Thanks to 143 years of experience and craftsmanship, the company produces around 190 different high-quality and durable brushes for horses and dogs with best materials and excellent workmanship.

A large part of the grooming brushes are made from:

- 100 % horsehair especially tight from the horse's tail
- 100 % pig bristles
- 100 % natural fibers
- beech wood from local forests

This guarantees the best cleaning effects with gentle, skin-friendly care, and massage effect and without any electrostatic charge!

Good price-performance ratio for grooming brushes with 100 % horsehair or 100 % pig bristles thanks to a lifespan of 10-20 years. The brushes are environmentally sustainable.

The high-quality synthetic bristles made of PPN, for instance in the »Superbrush« have a special wavy shape, which means they can pick up a lot of dirt. These bristles are characterized by a high stability of shape.
